A background image showing two hands shaking in a firm grip. The hand on the left is wearing a grey sleeve, and the hand on the right is wearing a white shirt with thin blue and red stripes. The handshake is centered in the frame, symbolizing agreement or partnership.

1. Who are you?

- Your background
- Your occupation
- Your interests

2. Why are you taking this course?

Guest lecturers

Dr Rifqah Roomaney
SAMRC

Dr Alberto Caoci
University of Cape Town

Mr Jerall Toi
Stellenbosch University

Learning objectives

1. **Critically evaluate** surveys as a research tool in the health sciences
2. Understand **logic and process** of conducting surveys
3. Design a **survey sampling** plan
4. Design a **survey instrument** and choose a mode of administration
5. Understand logistic, ethical and organisational aspects in **implementing** a survey plan

... a foundation in sampling, item development, instrument design, and survey administration that would allow them to conduct a survey/be aware of the issues to consider in the design and implementation of a survey.

What this course is **not**

- we assume you understand the **fundamental statistical concepts** (such a statistics, estimate, precision...) but not that you are a statistician.
 - we will discuss the statistical concepts behind **sample size calculation**, with practical examples in simple cases, but not for more complex cases.
 - we will also present some fundamental aspects that need to be taken into account when **analysing survey data**, but we will not discuss details of survey data analysis.
- however, **this is not to imply that statistics is not important** in planning and analysis of survey data. On the contrary, it is so important that it deserves a specific treatment (and a statistical background).
- Except for simple cases, you need to **consult a statistician** when planning a survey.

Summary questions

- What is a survey?
- What differentiate a survey from other research methods?
- Which kind of data collection tools do surveys use?
- What is the role of theory in the survey process?

Schedule

MAY						
S	M	T	W	T	F	S
	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30	31			

JUNE						
S	M	T	W	T	F	S
				1	2	3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	

- The scope of survey research
- Surveys in health research
- Formalising the survey process

- Target population, study population and sampling
- Sampling strategies

- Power, precision and sample size
- Quantifying theoretical constructs
- Data collection tools

- Non-response bias
- Modes of administration
- Beyond questionnaires
- Qualitative methods in survey research
- Fieldwork

- Data management
- Data analysis & reporting
- Ethical Aspects
- Privacy and the POPI act
